

Fork Positioner for Forklifts

Fork Positioner for Forklifts - A fork positioner is actually a tool made out of top quality materials meant to endure the most demanding procedures and work environments. This piece of equipment can enable the individual driving to be able to maneuver the blades hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the entire load or the arms so as to facilitate more accurate carrying and position in a faster and more effective method.

The blade pocket is somewhat unique and can enable the one operating it to be able to securely sway the forks into position without any worry of damaging the positioning cylinders. This can allow the driver the alternative to execute simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into blade positioners on existing units.
